

Low Poly Racing Track Starter Pack

A modular low poly racing track environment pack for Unity, designed for arcade-style racing games. Build custom circuits quickly by snapping together pre-made track pieces, ramps, loops, and obstacles in a clean, stylized visual style.

Overview

Low Poly Racing Track Starter Pack provides a ready-to-use collection of modular track segments, platforms, ramps, loops, barriers, and interactive obstacles. The art direction favors a **stylized low poly** look suited to **arcade racing** — fast to read, lightweight to render, and easy to extend.

Whether you are prototyping a new racer, building a mobile arcade title, or dressing a PC demo scene, this pack gives you a solid foundation without complex setup.

Features

- **Modular track system** — Combine road segments, ramps, loops, and platforms to build unique layouts
 - **Low poly stylized art** — Clean shapes and bold colors for arcade racing aesthetics
 - **Optimized meshes** — Efficient geometry suitable for real-time gameplay
 - **Easy to use** — Drag-and-drop prefabs; no coding required to get started
 - **Beginner friendly** — Ideal for developers new to level design in Unity
 - **Suitable for mobile and PC** — Lightweight assets that scale across platforms
-

Included Content

Check the categories below that apply to this package:

- ☒ **Straight Roads** — e.g. Road_Straight_Long
- ☒ **Ramps** — e.g. Ramp_Small
- ☒ **Loops** — e.g. Loop_Double
- ☒ **Platforms** — e.g. Platform_Landing
- ☒ **Obstacles** — e.g. Hammer_Double, Windmill_Large, Large_Fan
- ☒ **Barriers** — e.g. Barrier_Block
- ☒ **Demo Scene** — EnvironmentDemo/Scene/DemoScene.unity
- ☒ **Prefabs** — Organized by category under EnvironmentDemo/Prefabs/

- ☒ **Materials** — Shared materials under `EnvironmentDemo/Materials/`

Additional content

- ☒ **Props** — Start/finish gates, traffic cones
- ☒ **Demo vehicles** — Sample sedan meshes for scene population
- ☒ **Textures** — Palette and surface textures (1024–2048 px)

Note: Exact prefab and mesh counts may vary by version. Refer to the **Prefabs** and **Meshes** folders for the full list included in your download.

Getting Started

Follow these steps to begin building your track:

1. Import the package

Import **Low Poly Racing Track Starter Pack** into your Unity project via:

- **Asset Store:** Window → Package Manager → My Assets → Import
- **.unitypackage file:** Assets → Import Package → Custom Package

2. Open the Demo Scene

Navigate to:

`EnvironmentDemo/Scene/DemoScene.unity`

Double-click to open the pre-built demo and explore a sample track layout, lighting, and prefab placement.

3. Drag prefabs into the scene

Open the **Project** window and browse to:

`EnvironmentDemo/Prefabs/`

Drag any prefab from Roads, Ramps, Loops, Obstacles, or Props into the **Hierarchy** or **Scene** view.

4. Snap track pieces together

Position modular pieces so connection points align:

- Enable **Snap Settings** (Edit → Grid and Snap Settings) and use vertex or grid snapping for precise alignment
- Hold **Ctrl** (Windows) or **Cmd** (macOS) while moving objects to snap to the grid
- Duplicate placed segments (**Ctrl/Cmd + D**) to extend straights and repeat patterns quickly

5. Start building custom tracks

Experiment with ramps, loops, and obstacles to create your own circuit. Save your layout as a new scene when you are happy with the result.

Technical Information

Property	Details
Unity Version	6000.3.0f1 (<i>tested</i>) — Unity 2021.3 LTS or newer recommended
Render Pipeline	Built-in Render Pipeline (<i>default</i>) — URP/HDRP conversion may require material or shader updates
Texture Resolution	Primarily 2048×2048 and 1024×1024 (palette, tracks, props, skybox)
Polygon Count	Low poly — <i>varies per piece; see mesh import settings for details</i>

Folder Structure
